Description- specifications

FERTICELL Phoshor 10% Soluble Liquid is a certified organic fertilizer, from mineral (phosphoric rock) to supply high available P_2O_5 to the plant.

FERTICELL Phoshor 10% Soluble Liquid can be applied both foliar and/or irrigation in all kind of crops during any stage of the vegetative cycle. The phosphorus is an essential nutrient and it's involved in most of the biochemical reactions of the plant: photosynthesis, respiration, synthesis of proteins and carbohydrates; etc. The phosphorus (P) participates as well, in processes such as obtaining cellular energy (being part of the ADP and ATP molecules).

FERTICELL Phoshor 10% Soluble Liquid is especially indicated to improve the development of roots, to stimulate the formation of buttons in flowers and a healthy development of fruits in plants, avoiding the abscission phenomenon. Contain unicellular algae, being completely neutral and biologically active, making the assimilation of calcium that accompanies it faster and more complete. Algae are especially important in plant nutrition, as they give a higher yield, precocity and quality in all crops.

FERTICELL Phoshor 10% Soluble Liquid increases the resistance of plants in unfavourable weather conditions, and must be used especially during the flowering phase.
